SAMSKARA · VAMSHA VRUKSHA

Feature Guide

A complete, plain-language walkthrough of every feature in Samskara — your family's living record.

Core Archive

Family Tree

Build and browse your family tree across generations. Tap anyone to open their Folio, drag to pan, pinch/zoom to explore. Classic, Focus, and an auto-picked illustrated view for small trees.

Folio (person profile)

Each person's own page: dates, heritage details (rashi, gotra), life lessons, photos, chapters of their story. Admins/Heads edit directly; members submit edits for approval.

Fix a Relationship ADMIN / HEAD

Correct who's whose parent, with built-in checks — max 2 parents, no self-parent, no accidental loops in the tree.

Timeline / Vault

A chronological feed of everything added to the family archive — memories, milestones, and life events in the order they happened.

Gallery

The family's photo collection. Verified photos only; a "Private to me" tab for photos you've uploaded but haven't shared with the whole family yet.

Photo Tags

Tap a photo to pin a name on a face — link it to someone in the tree or just a free-text label. Any member can tag; only the tagger or a moderator can remove one.

Search

Find anyone in the family tree by name.

Vamshavali

A traditional lineage document — father's and mother's line, gotra, living status — generated from the tree data.

Onboarding & Joining

Regular Invites

A Head/Admin generates an invite link, optionally pre-linked to a specific person in the tree. The joining member redeems it and lands connected.

Fast Family Onboarding PILOT

Lets a new member describe how they're related to someone already in the tree — even if the connecting people aren't known yet — without ever inventing ancestors. Goes to an admin queue for proper resolution.

Join by Invite Code

A signed-in or new user can join a family with a one-time invite code from the login screen.

First Memory Wizard

Lets a completely anonymous visitor preserve one photo and story before ever signing up — a low-friction way to try the app before committing to an account.

Family Roles

Head

Full control: can rename the family, fix any relationship, remove someone from the tree, and everything an Admin can do.

Admin

Can edit the tree, approve/reject member submissions, manage invites, resolve onboarding questions — everything except removing someone from the tree (Head-only).

Member

Can view the shared archive, contribute memories/photos (goes to Pending for review unless they're a moderator), and tag photos.

Memory Capture

Contribute a Memory

Add a photo, story, voice recording, or video to the archive, tagged to a person or the family generally.

Voice-guided Folio fill-in

Answer a few spoken questions to fill in a person's heritage, life lesson, and summary — skip anything, pick it up later.

AI Interview PLAN-GATED

A guided voice Q&A that helps draft a biography from spoken answers.

Photo Scan & Translate PLAN-GATED

Extract text and details from scanned documents and photos.

Family Culture & Practice

Parampare

A living-heritage feed: family wisdom, sayings, and lineage details (gotra, pravara, veda, shakha, guru), filterable by category. Shareable one-time with another family via a code.

Treasury

A repository of family wisdom, quotes, and advice passed down.

Japa

Tracks chanting/spiritual-practice logs across family members.

Journey

A map plotting family members' life locations and migration routes across generations.

Library

A shared family book collection — who owns, gifted, read, or recommends each book. A book becomes a read-only "memorial" once its last owner has passed.

Sharing

Share a Photo (WhatsApp / Social)

Generate a public preview link for one approved photo, with a choice between a generic branded card or the actual photo as the preview image.

Gallery Export PARTNER INTEGRATION

A code-based, loginless way for an approved third-party photo tool to pull a family's verified photos.

Content Share (Parampare)

Share one lineage/wisdom entry with another family via a one-time redemption code — text only, never the photo.

Family Photobook (PDF) PLAN-GATED

Download a printable PDF photobook of the family tree.

Notifications & Connectivity

WhatsApp Connect ROLLING OUT

Message a WhatsApp number to send photos and stories straight from your phone, and get nudged when something needs your review.

Push Notifications

Browser/app notifications for family activity — new content, pending approvals.

Activity Feed

"What's new in the family" — a running log of recent additions.

Admin & Account Tools

Admin Dashboard ADMIN / HEAD

Review pending contributions, manage invites, see who's unlinked, manage roster and roles.

Connection Workbench ADMIN / HEAD

Resolve Fast Family Onboarding's queue: link an unlinked member, confirm a provisional person, invite someone named but missing, or mark a duplicate.

Account Settings

Manage your own account, display name, notification preferences, and request account/data deletion.

Plans

Starter/Rooted/Legacy tiers with different limits (tree size, photos, AI calls) and optional modules.

Trust & Privacy

Consent Gate

Every account explicitly reviews and agrees to the Privacy Policy and Terms before using the app — never a pre-ticked box.

Private-to-me Content

Mark a photo or memory as visible only to you until you choose to share it with the family.

Family Data Isolation

Enforced at the database level, not just the UI — one family's data is never visible to another family's members.

Account / Data Deletion

Self-service request to delete your account or export your data.

Public-Facing

Blog

Samskara's own stories and articles, open to anyone, no login required.

Live Demo

A fully browsable sample family tree (the Rao family) for anyone to explore before signing up.
